

Drugs and Supplements

Oxycodone And Acetaminophen (Oral Route)

Description and Brand Names

Drug information provided by: [Micromedex](#)

US Brand Name

Endocet	Descriptions
---------	--------------

Magnacet	
----------	--

Narvox	
--------	--

Percocet	
----------	--

Oxycodone and acetaminophen combination is used to relieve moderate to moderately severe pain.

Perloxx	
---------	--

Primalev	
----------	--

Roxicet	
---------	--

Acetaminophen is used to relieve pain and reduce fever in patients. It does not become habit-forming when taken for a long time. But acetaminophen may cause other unwanted effects when taken in large doses, including liver damage.

Roxilox	
---------	--

Tylox	
-------	--

Oxycodone belongs to the group of medicines called narcotic analgesics (pain medicines). It acts on the central nervous system (CNS) to relieve pain.

Xartemix XR	
-------------	--

Xolox	
-------	--

When oxycodone is used for a long time, it may become habit-forming, causing mental or physical dependence. However, people who have continuing pain should not let the fear of dependence keep them from using narcotics to relieve their pain.

Mental dependence (addiction) is not likely to occur when narcotics are used for this purpose. Physical dependence may lead to withdrawal side effects if treatment is stopped suddenly. However, severe withdrawal side effects can usually be prevented by gradually reducing the dose over a period of time before treatment is stopped completely.

This medicine is available only with your doctor's prescription.

This product is available in the following dosage forms:

- Tablet
- Solution

- Tablet, Extended Release
- Capsule

Before Using

In deciding to use a medicine, the risks of taking the medicine must be weighed against the good it will do. This is a decision you and your doctor will make. For this medicine, the following should be considered:

Allergies

Tell your doctor if you have ever had any unusual or allergic reaction to this medicine or any other medicines. Also tell your health care professional if you have any other types of allergies, such as to foods, dyes, preservatives, or animals. For non-prescription products, read the label or package ingredients carefully.

Pediatric

Appropriate studies have not been performed on the relationship of age to the effects of oxycodone and acetaminophen combination in the pediatric population. Safety and efficacy have not been established.

Geriatric

Appropriate studies performed to date have not demonstrated geriatric-specific problems that would limit the usefulness of oxycodone and acetaminophen solution and tablets in the elderly. However, elderly patients are more likely to have age-related kidney or liver problems, which may require caution and an adjustment in the dose for patients receiving this medicine.

Appropriate studies have not been performed on the relationship of age to the effects of oxycodone and acetaminophen capsules in the pediatric population. Safety and efficacy have not been established.

Pregnancy

	Pregnancy Category	Explanation
All Trimesters	C	Animal studies have shown an adverse effect and there are no adequate studies in pregnant women OR no animal studies have been conducted and there are no adequate studies in pregnant women.

Breastfeeding

There are no adequate studies in women for determining infant risk when using this medication during breastfeeding. Weigh the potential benefits against the potential risks before taking this medication while breastfeeding.

Drug Interactions

Although certain medicines should not be used together at all, in other cases two different medicines may be used together even if an interaction might occur. In these cases, your doctor may want to change the dose, or other precautions may be necessary. When you are taking this medicine, it is especially important that your healthcare professional know if you are taking any of the medicines listed below. The following interactions have been selected on the basis of their potential significance and are not necessarily all-inclusive.

Using this medicine with any of the following medicines is not recommended. Your doctor may decide not to treat you with this medication or change some of the other medicines you take.

- Naltrexone

Using this medicine with any of the following medicines is usually not recommended, but may be required in some cases. If both medicines are prescribed together, your doctor may change the dose or how often you use one or both of the medicines.

- Abiraterone
- Acepromazine
- Alfentanil
- Alprazolam
- Alvimopan
- Amiodarone
- Amisulpride
- Amprenavir
- Anileridine
- Aprepitant
- Aripiprazole
- Asenapine
- Atazanavir
- Baclofen
- Benperidol
- Boceprevir
- Brofaromine
- Bromazepam
- Buprenorphine

- Buspirone
- Butorphanol
- Carisoprodol
- Carphenazine
- Ceritinib
- Chloral Hydrate
- Chlordiazepoxide
- Chlorpromazine
- Chlorzoxazone
- Clarithromycin
- Clobazam
- Clonazepam
- Clorazepate
- Clorgyline
- Clozapine
- Cobicistat
- Codeine
- Conivaptan
- Crizotinib
- Cyclobenzaprine
- Dabrafenib
- Darunavir
- Delavirdine
- Dexmedetomidine
- Dezocine
- Diacetylmorphine
- Diazepam
- Dichloralphenazone
- Difenoxin
- Dihydrocodeine
- Diphenhydramine
- Diphenoxylate
- Donepezil
- Doxylamine
- Droperidol

- Enflurane
- Erythromycin
- Escitalopram
- Estazolam
- Eszopiclone
- Ethchlorvynol
- Ethopropazine
- Ethylmorphine
- Etomidate
- Fentanyl
- Flibanserin
- Flunitrazepam
- Fluphenazine
- Flurazepam
- Fluspirilene
- Fluvoxamine
- Fosaprepitant
- Fospropofol
- Furazolidone
- Halazepam
- Haloperidol
- Halothane
- Hexobarbital
- Hydrocodone
- Hydromorphone
- Hydroxyzine
- Idelalisib
- Imatinib
- Indinavir
- Iproniazid
- Isocarboxazid
- Isoflurane
- Isoniazid
- Ketamine
- Ketazolam

- Ketobemidone
- Ketoconazole
- Lazabemide
- Levorphanol
- Linezolid
- Lomitapide
- Loprazolam
- Lorazepam
- Lormetazepam
- Meclizine

- Olanzapine
- Opium
- Orphenadrine
- Oxazepam
- Oxycodone
- Oxymorphone
- Papaveretum
- Paregoric
- Pargyline
- Pentazocine
- Perazine
- Periciazine
- Perphenazine
- Phenelzine
- Pimozide
- Piperacetazine
- Piperaquine
- Pipotiazine
- Piritramide
- Pixantrone
- Pneumococcal 13-Valent Vaccine, Diphtheria Conjugate
- Posaconazole
- Prazepam
- Procarbazine
- Prochlorperazine
- Promazine
- Promethazine
- Propofol
- Propoxyphene

- Quazepam
- Quetiapine
- Ramelteon
- Rasagiline
- Regorafenib
- Remifentanyl
- Remoxipride
- Ritonavir
- Samidorphan
- Saquinavir
- Selegiline
- Sertindole
- Sertraline
- Sodium Oxybate
- Sufentanyl
- Sulpiride
- Suvorexant
- Tapentadol
- Telaprevir
- Telithromycin
- Temazepam
- Thiopropazate
- Thioridazine
- Ticagrelor
- Tilidine
- Tizanidine
- Tolonium Chloride
- Toloxatone
- Topiramate
- Tramadol
- Tranylcypromine
- Triazolam
- Trifluoperazine
- Trifluoperidol
- Triflupromazine

- Trimeprazine
- Zaleplon
- Zolpidem
- Zopiclone
- Zotepine

Using this medicine with any of the following medicines may cause an increased risk of certain side effects, but using both drugs may be the best treatment for you. If both medicines are prescribed together, your doctor may change the dose or how often you use one or both of the medicines.

- Acenocoumarol
- Carbamazepine
- Fosphenytoin
- Lixisenatide
- Miconazole
- Phenytoin
- Rifampin
- St John's Wort
- Voriconazole
- Warfarin
- Zidovudine

Other Interactions

Certain medicines should not be used at or around the time of eating food or eating certain types of food since interactions may occur. Using alcohol or tobacco with certain medicines may also cause interactions to occur. The following interactions have been selected on the basis of their potential significance and are not necessarily all-inclusive.

Using this medicine with any of the following is usually not recommended, but may be unavoidable in some cases. If used together, your doctor may change the dose or how often you use this medicine, or give you special instructions about the use of food, alcohol, or tobacco.

- Ethanol
- Tobacco

Using this medicine with any of the following may cause an increased risk of certain side effects but may be unavoidable in some cases. If used together, your doctor may change the dose or how often you use this medicine, or give you special instructions about the use of food, alcohol, or tobacco.

- Cabbage

Other Medical Problems

The presence of other medical problems may affect the use of this medicine. Make sure you tell your doctor if you have any other medical problems, especially:

- Addison's disease (adrenal gland problem) or
- Alcohol abuse, history of or
- Breathing or lung problems (eg, asthma, chronic obstructive pulmonary disease [COPD], cor pulmonale) or
- CNS depression or
- Drug dependence, especially with narcotic abuse or dependence, or history of or
- Enlarged prostate (BPH, prostatic hypertrophy) or
- Hypothyroidism (an underactive thyroid) or
- Hypovolemia (low blood volume) or
- Kyphoscoliosis (curvature of the spine with breathing problems) or
- Mental illness or
- Problems with passing urine or
- Weakened physical condition—Use with caution. May increase risk for more serious side effects.
- Asthma, severe or
- Hypercarbia (high carbon dioxide in the blood), severe or
- Paralytic ileus (bowels stop working and may be blocked) or
- Respiratory depression (very slow breathing)—Should not be used in patients with these conditions.
- Brain tumor, history of or
- Head injuries, history of or
- Increased pressure in the head—Some of the side effects of oxycodone can cause serious problems in people who have these medical problems.
- Hypotension (low blood pressure) or
- Pancreatitis (inflammation of the pancreas) or
- Seizures, history of—Use with caution. May make these conditions worse.
- Kidney disease or
- Liver disease—Use with caution. The effects may be increased because of slower removal of the medicine from the body.
- Stomach or digestion problems—This medicine may mask the diagnosis of these conditions.

Proper Use

Take this medicine only as directed by your doctor. Do not take more of it, do not take it more often, and do not take it for a longer time than your doctor ordered. This is especially important for elderly patients, who may be more sensitive to the effects of pain medicines. If too much of this medicine is taken for a long time, it may become habit-forming and cause mental or physical dependence. Also, large amounts of acetaminophen may cause liver damage if taken for a long time.

This medicine should come with a Medication Guide. Read and follow these instructions carefully. Ask your doctor if you have any questions.

You may take this medicine with or without food.

Measure the oral liquid using the patient cup that comes with the package.

Swallow the extended-release tablet whole with water. Do not crush, break, chew, or dissolve it. Do not pre-soak, lick, or wet the tablet before placing it in your mouth. Do not give this medicine by feeding tubes.

Check with your doctor first before changing dosage forms (eg, capsules, extended-release tablets, tablets). These forms are very different from each other.

This combination medicine contains acetaminophen (Tylenol®). Carefully check the labels of all other medicines you are using, because they may also contain acetaminophen. It is not safe to use more than 4 grams (4,000 milligrams) of acetaminophen in one day (24 hours).

Dosing

The dose of this medicine will be different for different patients. Follow your doctor's orders or the directions on the label. The following information includes only the average doses of this medicine. If your dose is different, do not change it unless your doctor tells you to do so.

The amount of medicine that you take depends on the strength of the medicine. Also, the number of doses you take each day, the time allowed between doses, and the length of time you take the medicine depend on the medical problem for which you are using the medicine.

- For moderate to moderately severe pain:
 - For oral dosage form (capsules):
 - Adults—1 capsule every 6 hours as needed.
 - Children—Use and dose must be determined by your doctor.
 - For oral dosage form (extended-release tablets):
 - Adults—2 tablets every 12 hours as needed. The second dose may be given as early as 8 hours after your first dose, and the following doses are given every 12 hours.
 - Children—Use and dose must be determined by your doctor.
 - For oral dosage form (solution):

- Adults—5 milliliters (mL) or one teaspoonful every 6 hours as needed. Your doctor may increase your dose as needed. However, the dose is usually not more than 60 mL (12 teaspoonfuls) per day.
- Children—Use and dose must be determined by your doctor.
- For oral dosage form (tablets):
 - Adults—1 tablet every 6 hours as needed.
 - Children—Use and dose must be determined by your doctor.

Missed Dose

If you miss a dose of this medicine, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule. Do not double doses.

Storage

Store the medicine in a closed container at room temperature, away from heat, moisture, and direct light. Keep from freezing.

Keep out of the reach of children.

Do not keep outdated medicine or medicine no longer needed.

Ask your healthcare professional how you should dispose of any medicine you do not use.

Flush any unused capsules, liquid, or tablets down the toilet.

Precautions

It is very important that your doctor check your progress while you are taking this medicine. This will allow your doctor to see if the medicine is working properly and to decide if you should continue to take it.

It is against the law and dangerous for anyone else to use your medicine. Keep your unused tablets in a safe and secure place. People who are addicted to drugs might want to steal this medicine.

This medicine will add to the effects of alcohol and other CNS depressants (medicines that can make you drowsy or less alert). Some examples of CNS depressants are antihistamines or medicine for allergies or colds, sedatives, tranquilizers, or sleeping medicine, other prescription pain medicine or narcotics, medicine for seizures or barbiturates, muscle relaxants, or anesthetics, including some dental anesthetics. Also, there may be a greater risk of liver damage if you drink three or more alcoholic beverages while you are taking acetaminophen. Do not drink alcoholic beverages, and check with your doctor before taking any of these medicines while you are using this medicine.

This medicine may be habit-forming. If you feel that the medicine is not working as well, do not use more than your prescribed dose. Call your doctor for instructions.

Do not use Xartermis™ XR if you have used an MAO inhibitor in the past 14 days. Using these medicine together may cause serious unwanted effects.

Dizziness, lightheadedness, or fainting may occur when you get up suddenly from a lying or sitting position. Getting up slowly may help lessen this problem. Also, lying down for a while may relieve the dizziness or lightheadedness.

This medicine may make you dizzy, drowsy, or lightheaded. Make sure you know how you react to this medicine before you drive, use machines, or do anything else that could be dangerous if you are dizzy or not alert.

Check with your doctor right away if you have pain or tenderness in the upper stomach, pale stools, dark urine, loss of appetite, nausea, unusual tiredness or weakness, or yellow eyes or skin. These could be symptoms of a serious liver problem.

Serious skin reactions can occur with this medicine. Check with your doctor right away if you have blistering, peeling, or loose skin, red skin lesions, severe acne or skin rash, sores or ulcers on the skin, or fever or chills while you are using this medicine.

This medicine may cause serious allergic reactions, including anaphylaxis. Anaphylaxis can be life-threatening and requires immediate medical attention. Call your doctor right away if you have a rash, itching, hoarseness, trouble breathing, trouble swallowing, or any swelling of your hands, face, or mouth while you are using this medicine.

Using narcotics for a long time can cause severe constipation. To prevent this, your doctor may direct you to take laxatives, drink a lot of fluids, or increase the amount of fiber in your diet. Be sure to follow the directions carefully, because continuing constipation can lead to more serious problems.

If you have been using this medicine regularly for several weeks or longer, do not change your dose or suddenly stop using it without checking with your doctor. Your doctor may want you to gradually reduce the amount you are using before stopping it completely. This may help prevent worsening of your condition and reduce the possibility of withdrawal symptoms, such as abdominal or stomach cramps, anxiety, fever, irritability, nausea, restlessness, runny nose, sweating, tremors, or trouble with sleeping.

Using this medicine while you are pregnant may cause serious unwanted effects in your newborn baby. Tell your doctor right away if you think you are pregnant or if you plan to become pregnant while using this medicine.

Before you have any medical tests, tell the medical doctor in charge that you are taking this medicine. The results of some tests may be affected by this medicine.

Do not take other medicines unless they have been discussed with your doctor. This includes prescription or nonprescription (over-the-counter [OTC]) medicines and herbal or vitamin supplements.

Side Effects

Along with its needed effects, a medicine may cause some unwanted effects. Although not all of these side effects may occur, if they do occur they may need medical attention.

Check with your doctor immediately if any of the following side effects occur:

More common

- Abdominal or stomach pain
- black, tarry stools
- chills
- dark urine
- dizziness
- fever
- headache
- itching
- light-colored stools
- loss of appetite
- nausea
- rash
- unpleasant breath odor
- unusual tiredness or weakness
- vomiting of blood
- yellow eyes or skin

Rare

- Cough or hoarseness
- fever with or without chills
- general feeling of tiredness or weakness
- lower back or side pain
- painful or difficult urination
- sore throat
- sores, ulcers, or white spots on the lips or in the mouth
- unusual bleeding or bruising

Incidence not known

- Back, leg, or stomach pains
- bleeding gums

- bloating
- blood in the urine or stools
- blue lips and fingernails
- blurred vision
- burning, crawling, itching, numbness, prickling, "pins and needles", or tingling feelings
- chest pain or discomfort
- clay-colored stools
- cloudy urine
- clumsiness
- confusion
- constipation
- coughing that sometimes produces a pink frothy sputum
- decrease in the frequency of urination
- decrease in urine volume
- decreased awareness or responsiveness
- decreased frequency or amount of urine
- decreased urination
- difficult or labored breathing
- difficult or painful urination
- difficult, fast, noisy breathing, sometimes with wheezing
- difficulty in passing urine (dribbling)
- difficulty with swallowing
- dizziness, faintness, or lightheadedness when getting up suddenly from a lying or sitting position
- drowsiness
- dry mouth
- extremely shallow or slow breathing
- fainting
- fast or deep breathing
- fast, slow, irregular, pounding, or racing heartbeat or pulse
- feeling of warmth
- general body swelling
- greatly decreased frequency of urination or amount of urine
- increased sweating
- increased thirst

- indigestion
- large, hive-like swelling on the face, eyelids, lips, tongue, throat, hands, legs, feet, or sex organs
- lightheadedness
- muscle aches
- muscle tremors
- muscle weakness
- nervousness
- noisy breathing
- nosebleeds
- numbness or tingling in the hands, feet, or lips
- pains in the stomach, side, or abdomen, possibly radiating to the back
- pale skin
- pinpoint red spots on the skin
- pounding in the ears
- puffiness or swelling of the eyelids or around the eyes, face, lips, or tongue
- rapid, deep breathing
- rapid, shallow breathing
- redness of the face, neck, arms, and occasionally, upper chest
- redness of the skin
- restlessness
- seizures
- severe constipation
- severe sleepiness
- severe vomiting
- shivering
- skin blisters
- skin rash, hives, or welts
- sleepiness
- slow or irregular breathing
- sore throat
- stomach cramps
- stomach pain, continuing
- sudden decrease in the amount of urine
- sunken eyes

- sweating
- swelling in the legs and ankles
- swelling of the face, fingers, or lower legs
- thirst
- tightness in the chest
- tiredness
- troubled breathing
- unpleasant breath odor
- upper right abdominal or stomach pain
- vomiting
- weak or feeble pulse
- weakness or heaviness of the legs
- weight gain
- wrinkled skin

Get emergency help immediately if any of the following symptoms of overdose occur:

Symptoms of overdose

- Bluish lips or skin
- change in consciousness
- cold, clammy skin
- extreme sleepiness
- general feeling of discomfort or illness
- loss of consciousness
- no blood pressure or pulse
- not breathing
- stopping of heart
- unconsciousness

Some side effects may occur that usually do not need medical attention. These side effects may go away during treatment as your body adjusts to the medicine. Also, your health care professional may be able to tell you about ways to prevent or reduce some of these side effects. Check with your health care professional if any of the following side effects continue or are bothersome or if you have any questions about them:

More common

- Relaxed and calm

Incidence not known

- Acid or sour stomach
- agitation
- bad or unusual or unpleasant (after) taste
- belching
- change in taste
- cold sweats
- constricted, pinpoint, or small pupils (black part of the eye)
- continuing ringing or buzzing or other unexplained noise in the ears
- cool, pale skin
- depression
- diarrhea
- difficulty with moving
- disturbed color perception
- double vision
- excess air or gas in the stomach or intestines
- false or unusual sense of well-being
- flushed, dry skin
- fruit-like breath odor
- full feeling
- general feeling of discomfort or illness
- halos around lights
- hearing loss
- heartburn
- increased hunger
- increased thirst
- increased urination
- indigestion
- joint pain
- lack or loss of strength
- muscle cramps or spasms
- muscle pain or stiffness
- night blindness
- nightmares
- overbright appearance of lights
- passing gas

- red eye
- seeing, hearing, or feeling things that are not there
- seizures
- shakiness
- sleepiness or unusual drowsiness
- slurred speech
- stomach discomfort, upset, or pain
- stomach fullness
- sweating
- swollen joints
- thirst
- trouble sleeping
- tunnel vision
- unexplained weight loss
- unusual drowsiness, dullness, tiredness, weakness, or feeling of sluggishness

Other side effects not listed may also occur in some patients. If you notice any other effects, check with your healthcare professional.

Call your doctor for medical advice about side effects. You may report side effects to the FDA at 1-800-FDA-1088.
